# Introduction

Creative Virtual is a small, well-established, international, privately-owned company operating in the area of Conversational AI.

Founded in November 2003, the company has grown organically without major investment, winning many enterprise level customers and prestigious awards, including the Queen’s Awards for Enterprise in Innovation.

Some early clients have stayed with the company for over a decade because of the rich feature set developed over the years.

Staff likewise enjoy the collaborative, high-pressure environment, punching above their weight against industry giants such as IBM, Microsoft and Google, and winning, as this independent analysis from 2020 shows. Two-thirds of the workforce have been with the company for 4 or more years, and the turnover rate for technical team members is even lower.

## UI Development

With over 20 years' experience and expertise in delivering NLP and conversational AI solutions, Creative Virtual have developed a specialised, complex and richly functional content management system to meet the needs of heavily regulated industries adopting customer channels using these technologies.

During 2021, this application has been largely re-architected with microservice-based APIs at the back end and a modern front end using technologies such as Vue 3, Typescript, and React.

The first APIs have been delivered towards the end of 2021, and there are now exciting opportunities for experienced and enthusiastic front end developers to join the team.

This is a rare chance to get in on the ground floor of the development of a product that will change the face of conversational AI, predicted to be one of the hottest products for businesses globally in 2022.

The current opportunities are full-time and permanent, with a similar re-write of our companion Live Chat product due to start in 2022.

Benefits include a competitive salary, flexible remote working around negotiable core hours, an annual performance bonus scheme, and guaranteed job satisfaction.
